

OM GANDHI

Senior Mobile Engineer · iOS · Android · React Native

Ahmedabad, India | omgandhi.dev | omkgandhi@outlook.com | [GitHub](#) · [LinkedIn](#)

PROFESSIONAL SUMMARY

Mobile-first technical leader with 3+ years shipping production iOS, macOS, and React Native applications used by 500+ business customers. Experienced in architecting scalable mobile systems using Clean Architecture, MVVM, and modular design patterns — with hands-on ownership of CI/CD pipelines, OTA release automation, and on-device ML features. Led a team of 5 engineers across a 5-product B2B SaaS suite, driving quality standards that cut production bugs by ~80% in a single quarter. MSc research focused on digital payment architecture and UPI adoption — bringing genuine FinTech domain depth to mobile product problems.

CORE SKILLS

Apple Platforms: Swift · SwiftUI · UIKit · CoreML · Apple Foundation Models · SwiftData · XCTest

Cross-Platform: React Native · TypeScript · Kotlin · Jetpack Compose · React

Architecture: Clean Architecture · MVVM · TCA · Modular Design · System Design · Offline-First

DevOps & Release: Fastlane · CodePush · EAS (OTA) · CI/CD Pipelines · GitHub Actions · Git · Agile / Scrum

UI & Animation: Framer Motion · Lottie · SceneKit · Tailwind CSS · Figma

AI & ML: On-Device ML (CoreML, MLKit) · Apple Foundation Models · Performance Optimisation

PROFESSIONAL EXPERIENCE

Lead Mobile & Frontend Engineer · Magenta Insights *May 2025 – Present*

Engineering owner across a 5-product B2B SaaS suite — Magenta BI 2.0, Magenta CRM, and Magenta On Field — serving 500+ business customers on iOS, Android, and web.

- ▶ Architected the mobile foundation across all 5 products using Clean Architecture and MVVM, enforcing separation of concerns and enabling independent testability — establishing the system-design baseline adopted by the full engineering team.
- ▶ Led a team of 5 engineers across two Agile sprint tracks, owning technical roadmap planning, code-review standards, and PR templates — reducing production bugs by ~80% within the first quarter.
- ▶ Cut deployment cycles from multi-day releases to continuous weekly shipping by introducing Fastlane automation, OTA pipelines (CodePush / EAS), and branch-based CI/CD — eliminating manual intervention from every release.
- ▶ Drove performance optimisation across the mobile stack, resolving latency bottlenecks in data-fetching and UI rendering layers to achieve frame-stable, production-grade interfaces.
- ▶ Served as the architectural bridge between product, design, and engineering — translating roadmap requirements into system-level decisions and enforcing quality standards across all platforms.

Technical Demonstrator · Edinburgh Napier University *Sept 2024 – March 2025*

Part-time teaching role alongside MSc studies.

- ▶ Ran weekly lab sessions for cohorts of 15–30 students covering software engineering, OOP (C#), and algorithmic problem-solving — building the mentorship and technical communication skills that now underpin team leadership at Magenta.
- ▶ Hosted open university Q&A sessions available to the full student body, providing real-time debugging support across multiple concurrent modules.

iOS Developer · Athulya Tech *Jan 2023 – Dec 2023*

First full-time engineering role — promoted from intern to iOS developer within the onboarding period.

- ▶ Promoted from intern to full-time iOS developer within the onboarding period, skipping the standard trial period, on the strength of code quality and delivery pace.
- ▶ Resolved latency and reliability failures in legacy auth and data-fetching layers by migrating to Alamofire — improving request performance across multiple client applications.
- ▶ Delivered production-ready UI experiences by integrating Lottie animations and refactoring view lifecycle management, resulting in fluid, frame-stable interfaces shipped to end users.

SELECTED PROJECTS

Nova Key — macOS · App Store & GitHub · [On-Device AI Command Palette](#)

- ▶ Built a privacy-first macOS productivity utility (Cmd+Shift+K) powered by Apple Foundation Models — all natural language processing runs fully on-device with zero data egress and near-zero latency.
- ▶ Engineered offline-first AI scheduling and unified system search using Clean Architecture, eliminating server round-trips entirely and delivering instant responses with no network dependency.

Oink! — iOS · App Store & GitHub · [Personal Finance Tracker](#)

- ▶ Architected secure on-device data persistence via SwiftData and real-time spending visualisation using Swift Charts and SwiftUI — 100% local, zero backend infrastructure.

Translo — iOS/macOS · GitHub · [On-Device ML Translator](#)

- ▶ Shipped a zero-latency, fully offline text translation app using Google MLKit — real-time translation with no server dependency and no inference cost.

EDUCATION

M.Sc. Business Information Technology · Edinburgh Napier University *2024 – 2025*

Dissertation: Growth of UPI Adoption in India — FinTech trends, digital payment architecture, and consumer behaviour. Provides direct domain depth in the payment infrastructure and regulatory landscape relevant to FinTech mobile roles.

B.E. Computer Science & Engineering · Gujarat Technological University *2019 – 2023*
