

OM GANDHI

Mobile & Frontend Engineer · iOS · Android · React · React Native

Ahmedabad, India | omgandhi255@gmail.com | omgandhi.dev | linkedin.com/in/gandhiom | github.com/Omgandhi18

SUMMARY

Mobile and frontend engineer leading a five-person team on a five-product B2B SaaS suite used by 700+ businesses and roughly 2,000+ end users. Comfortable across the stack — Swift/SwiftUI on iOS, Kotlin/Compose on Android, and React, React Native, and TypeScript on the web and cross-platform side. Three iOS/macOS apps shipped to the App Store, most built around on-device ML and a privacy-first approach. I like owning things end to end: architecture, the shared component layer, CI/CD, and the release pipeline.

CORE SKILLS

Languages: Swift · TypeScript · JavaScript · Kotlin

iOS / macOS: SwiftUI · UIKit · CoreML · Apple Foundation Models · SwiftData · XCTest

Android: Kotlin · Jetpack Compose

Web & Cross-Platform: React · React Native · Module Federation · shadcn/ui · Tailwind CSS · Framer Motion

Architecture: Clean Architecture · MVVM · Modular / Micro-frontends · Offline-First · System Design

Release & Tooling: Fastlane · CodePush · EAS (OTA) · GitHub Actions · CI/CD · Git · Sentry · Figma

EXPERIENCE

Lead Mobile & Frontend Engineer · Magenta Insights

May 2025 – Present

Engineering owner across a five-product B2B SaaS suite (Magenta BI 2.0, Magenta CRM, Magenta On Field) on iOS, Android, and web — 700+ business customers, ~2,000+ end users.

- Lead a team of 5 engineers across two sprint tracks, owning the technical roadmap, code-review standards, and PR process. Cut production bugs by ~80% in one quarter by using **Sentry** to trace recurring crashes to their origin and fixing them at the root rather than patching symptoms.
- Built a shared component library on top of **shadcn/ui** and wired it across products with **Module Federation**, so every frontend pulls from one source of truth instead of re-implementing UI per product.
- Set up the mobile architecture (Clean Architecture + MVVM) shared across all five products, keeping each app independently testable and consistent as the team scaled.
- Moved releases from multi-day manual pushes to weekly shipping by introducing Fastlane, OTA updates (CodePush / EAS), and branch-based CI/CD — removing manual steps from every release.

Technical Demonstrator · Edinburgh Napier University

Sept 2024 – Mar 2025

Part-time teaching role alongside MSc studies.

- Ran weekly lab sessions for cohorts of 15–30 students on software engineering, OOP in C#, and algorithmic problem-solving.
- Held open Q&A and live-debugging sessions across concurrent modules for the wider student body.

iOS Developer · Athulya Tech

Jan 2023 – Dec 2023

First full-time engineering role — moved from intern to iOS developer during onboarding.

- Migrated legacy networking to Alamofire, fixing latency and reliability issues in auth and data-fetching across multiple client apps.
- Shipped smoother UI by integrating Lottie animations and cleaning up view-lifecycle handling for frame-stable interfaces.

SELECTED PROJECTS

Nova Key — macOS · App Store & GitHub

On-device AI command palette (⌘K) built on Apple Foundation Models — natural-language commands, scheduling, and system search run fully on-device with no network calls.

Oink! — iOS · App Store & GitHub

Personal finance tracker with fully local storage (SwiftData) and live spending charts (Swift Charts) — no backend, nothing leaves the device.

Translo — iOS / macOS · GitHub

Offline text translator using Google MLKit — real-time, on-device translation with no server dependency or inference cost.

WhatsBi — Chrome Extension · React / TypeScript

Extension built at Magenta that surfaces customer business data — outstandings, sales and purchase trends, available stock — from the Magenta BI web platform directly inside WhatsApp Web.

Silo — iOS · App Store

Privacy-first, on-device product locker and wishlist app — SwiftData, a masonry grid, and a Share Sheet entry point, with no backend or account.

EDUCATION

M.Sc. Business Information Technology · Edinburgh Napier University

2024 – 2025

Dissertation on the growth of UPI adoption in India (awarded a distinction) — digital payment architecture and consumer behaviour.

B.E. Computer Science & Engineering · Gujarat Technological University

2019 – 2023
