

OM GANDHI

Lead Mobile & iOS Engineer · Swift / SwiftUI · React Native · On-Device ML

Ahmedabad, India · omgandhi255@gmail.com · omgandhi.dev · linkedin.com/in/gandhiom · github.com/Omgandhi18

SUMMARY

Mobile-first engineering lead with 3+ years shipping production iOS, macOS, and React Native applications. Currently lead a 5-engineer team across a five-product B2B SaaS suite serving 750+ business customers and 13,000+ end users, owning architecture, the shared component layer, CI/CD, and release. Deep in Swift/SwiftUI, Clean Architecture, and on-device ML (CoreML, Apple Foundation Models) — three apps independently shipped to the App Store. Product-minded and data-driven: instrument analytics, ship behind feature flags, and monitor adoption rather than just closing tickets. MSc in Business Information Technology (Distinction) — dissertation on UPI adoption and digital-payment architecture, giving genuine fintech domain depth.

CORE SKILLS

Languages: Swift · TypeScript · JavaScript · Kotlin

iOS / macOS: SwiftUI · UIKit · CoreML · Apple Foundation Models · SwiftData · CoreData · XCTest · WidgetKit · Live Activities · WatchConnectivity

Architecture: Clean Architecture · MVVM · VIPER · Coordinator Pattern · Modular Design · Offline-First · System Design

Cross-Platform & Web: React Native · React · Kotlin / Jetpack Compose · Module Federation · shadcn/ui · Tailwind CSS · Framer Motion

CI/CD & Release: Fastlane · GitHub Actions · CodePush · EAS (OTA) · TestFlight · Sentry · Git

Growth & Data: Analytics instrumentation · feature flags · A/B testing · adoption monitoring

Fintech: Digital-payment architecture · UPI / payment-flow UX · payment-messaging automation · REST APIs

EXPERIENCE

Lead Mobile & Frontend Engineer · Magenta Insights

May 2025 – Present

Engineering owner across a five-product B2B SaaS suite (Magenta BI 2.0, Magenta CRM, Magenta On Field) on iOS, Android, and web — 750+ business customers, 13,000+ end users.

- ▶ Architected the mobile foundation (Clean Architecture + MVVM) adopted across all five products, and cut deployments from multi-day manual releases to continuous weekly shipping via Fastlane, OTA updates (CodePush/EAS), and branch-based CI/CD.
- ▶ Lead a team of 5 engineers, partnering directly with stakeholders to own the technical roadmap, code-review standards, and PR process; cut production bugs ~80% in one quarter by using Sentry to trace crashes to root cause rather than patch symptoms.
- ▶ Built Magenta On Field with offline-first data sync, geofenced attendance, and route optimisation — handling unreliable network conditions using CoreData and background sync strategies.
- ▶ Shipped Magenta BI 2.0, an analytics dashboard platform with drill-down filtering, real-time sync, and role-based views, built on SwiftUI with UIKit interop for older-device support.
- ▶ Built a shared component library (shadcn/ui + Module Federation on web) reused across every product, and shipped WhatsBi, a Chrome extension automating WhatsApp Web payment messaging for business customers.

Technical Demonstrator · Edinburgh Napier University

Sept 2024 – Mar 2025

- ▶ Ran weekly lab sessions for cohorts of 15–30 students in software engineering, OOP (C#), and algorithmic problem-solving.
- ▶ Hosted open Q&A and live-debugging sessions for the wider student body — sharpened the ability to explain technical concepts to non-expert audiences.

iOS Developer · Athulya Tech

Jan 2023 – Dec 2023

- ▶ Promoted from intern to full-time iOS developer within the onboarding period on the strength of code quality and delivery pace.
- ▶ Migrated legacy auth and data-fetching layers to Alamofire, resolving latency and reliability issues across multiple client applications.
- ▶ Shipped smoother UI by integrating Lottie animations and refactoring view-lifecycle management for frame-stable interfaces.

SELECTED PROJECTS — SHIPPED TO THE APP STORE

Nova Key — macOS · On-device AI command palette (Cmd+Shift+K) on Apple Foundation Models — zero data egress, near-zero latency.

Oink! — iOS · Personal finance tracker, fully local storage (SwiftData) and live spending charts (Swift Charts) — no backend.

Silo — iOS · On-device product locker and wishlist app — SwiftData, masonry grid, Share Sheet entry, no backend or account.

Translo — iOS / macOS · Offline text translator using Google MLKit — real-time, on-device, no server dependency or inference cost.

EDUCATION

M.Sc. Business Information Technology · Edinburgh Napier University, UK

2024 – 2025

Dissertation (Distinction): Growth of UPI Adoption in India — digital payment architecture and consumer behaviour.

B.E. Computer Science & Engineering · Gujarat Technological University, India

2019 – 2023
